Environmental Communication and Critical Coastal Policy

Communities, Culture and Nature

By Kerrie Foxwell-Norton, Griffith University, Australia

Series: Routledge Studies in Environmental Communication and Media

This analysis of coastal management and public participation places local culture and local media at the forefront. Using original research data from local coastal zones the book challenges the current status quo in environmental policy which posits that more science and better communication will deliver greater citizen participation in, and awareness of, environmental issues. Instead, the book argues that this approach has been largely responsible for the lacklustre response by citizens to environmental concerns and that the inclusion of a range of local meanings and cultural frameworks with which experts could engage would better incite citizen participation.
